Statement: Recalibration

June 9, 2013, Auburn Hills, Mich. - Chrysler Group will recall approximately 14,800 cars to recalibrate their powertrain control modules.

Internal testing discovered a car that stalled moments after startup. The incident occurred when the vehicle was brought to a stop after driving a short distance.

It had been parked for eight hours in a 20F climate chamber.

Further investigation revealed reports of similar incidents recorded by dealers.

Chrysler Group is unaware of any related injuries or accidents.

The recall affects only 2013 Dodge Dart models equipped with a 1.4-liter engine and dual-clutch transmission.

Approximately 12,900 are in the U.S., including Puerto Rico and the U.S. Virgin Islands; 1,900 are in Canada, five are in Mexico and 16 are outside the NAFTA region.

Recalibrations will be performed at no cost to customers, who will be contacted directly.

Customers who have questions or concerns can call 1-800-853-1403.
