Statement: Bushings

April 19, 2019, Auburn Hills, Mich. - FCA US is recalling an estimated 298,439 vehicles in the U.S. to replace their shift-cable bushings.

An FCA US investigation discovered certain cars are equipped with a cable bushing that may degrade after prolonged exposure to high ambient heat and humidity. Should degradation occur, it may prohibit the driver from shifting gears.

The Company is unaware of any related injuries or collisions, but such circumstances raise the risk of unintended vehicle movement. Therefore, customers are reminded to follow the vehicle's operating instructions before exiting; these instructions include shutting off the engine and engaging the parking brake.

The campaign's scope is limited to model-year 2013-2016 Dodge Dart sedans equipped with automatic transmissions.

FCA will advise customers when they may schedule service, which will be provided free of charge. In the interim, those with questions or concerns may contact their dealers or call the FCA US Recall Information Center at (800) 853-1403.

The recall also affects vehicles in Canada (est. 20,117), Mexico (est. 3,389) and certain market outside North America (est. 874).
