Dodge Challenger SRT10 Concept

October 13, 2008, Auburn Hills, Mich. - The opportunity for SRT engineering to "one-up" itself comes to fruition with the 2009 Dodge Challenger SRT10 Concept. Power for the 2009 Dodge Challenger SRT10 Concept comes from the Dodge Viper 8.4-liter, all-aluminum V-10 engine with 600 horsepower and 560 lb. ft. of torque. This new halo concept delivers the well-known SRT credo of benchmark performance. The Dodge Challenger SRT10 Concept includes a fresh coat of Tornado Red paint with a carbon-fiber deck lid and hood. The "shaker hood" is a nostalgic representation of the 1970 HEMI Cuda, giving the 600-hp Viper V-10 engine room to breathe. Brakes have been upgraded and BILSTEIN® shocks at all four corners improve handling balance. The interior boasts sport seats and carbon-fiber accents throughout and, of course, true to the Viper-powered vehicle lineage, a red engine start push-button in the dash.
