Chrysler Town & Country EV

- Chrysler Town & Country EV: The perfect fuel-efficient family vehicle
- Range-extended powertrain delivers exceptional fuel economy, minimal environmental impact and the same seven-passenger capability

January 10, 2009, Detroit - The Chrysler Town & Country EV is a Range-extended Electric Vehicle that demonstrates another possible application of ENVI electric-drive technology.

"Twenty-five years ago, Chrysler invented the minivan," said Frank Klegon, Executive Vice President – Product Development, Chrysler LLC. "And now, with ENVI's Range-extended Electric Vehicle powertrain, Chrysler is reinventing America's favorite minivan."

The Chrysler Town & Country EV combines the electric-drive components of an Electric Vehicle with an integrated small-displacement engine and generator to produce additional electricity to power the electric-drive system when needed. This provides all of the positive attributes of an Electric Vehicle and extends the driving range to be equivalent to today's gasoline-powered vehicles – without compromises.

The Chrysler Town & Country EV uses a 200 kW (268 horsepower) motor, producing 350 N•m (258 lb.-ft.) of torque. The Chrysler EV Range-extended Electric Vehicle can drive 40 miles on all-electric power, and boasts a range of 400 miles. This makes the Chrysler EV the perfect fuel-efficient family vehicle.

An all-new Liquid Graphite Pearl exterior is featured on the Chrysler Town & Country EV, which wears new, large "EV" graphics on both sides of the vehicle.
